

# #26 With love from Shanghai [by 圓環]

Use thick, sturdy paper [I used 235 grams matt-coated photo paper].

First cut along the outlines with a sharp knife.

Dotted lines are folding lines; incise. Do not cut through the paper.

First fold all parts and then glue.

Areas marked with 'g' are mating surfaces.

Assemble all parts separately before constructing the model.

Cut away excess paper if necessary.

Yellow areas mark the locations where the squirrel's parts connect.

First connect the tail to the body, then the head to the body, then the hind legs and forelegs.

Read, look and think before you cut and use glue!

Feed me back your suggestions, questions etc.

Have fun!

Please send me some nice photos of the squirrel in your neighbourhood. I will upload them to the e440's travels blog...

Cheers, Ring

Add weight to the inside of the belly using two little coins [otherwise the squirrel will tip backwards]. First glue the g\* marked areas to the belly. Then glue the coins to the inside of the belly here.
